

Beef Facility Flooring

The logo for animat, featuring the word "animat" in a bold, lowercase, sans-serif font. The letter "i" is stylized with a white outline and a small white dot. The logo is set against a green rectangular background with rounded corners and a white border.

A NORTH WEST RUBBER COMPANY

A group of black cows is gathered in a barn. The floor is made of dark, slatted rubber flooring with a grid of rectangular holes. The cows are looking in various directions, with one cow in the foreground looking directly at the camera. The background shows more cows and the structure of the barn.

MaxGrip Slatted Rubber Flooring

Performance

MaxGrip mats have been designed specifically for slatted floor confinement facilities to improve traction, increase overall cattle performance, and provide better health for cattle on concrete slats.

How did we obtain this level of performance? We've been manufacturing and installing our mats for over 40 years. Producer satisfaction is what drives us to make a high-quality product, with a competitive warranty to back it. We stand behind our product.

MAX GRIP

The high traction diamond tread pattern and the cushioned, heavy duty rubber construction helps to reduce cattle injuries. The rubber mat provides a barrier between the hard concrete slat and your animals. This cushioned barrier helps reduce swollen joints and bruising, allowing you to produce the highest quality product.

Increases weight gain and overall performance

Fastest & Easiest Installation

At Animat we know not all slats are the same, and that every slatted floor project is different. We work with you, or your builder, to “custom cut” the mats to fit your specific floor plan. Providing this service to our customers allows for a quicker and easier installation. It reduces cutting time and labor, saving you money.

Original Locking System

Developed by Animat

Animat's locking system is second to none. Our locks are easy to install and keep our mats in place.

Easy installation
with a simple drill!

Slatted Rubber Flooring

MaxGrip's unique design gives cattle confidence when getting up or lying down, and allows them to move throughout the pen easily with sure footing. Cattle will tend to visit the feed bunk more often, thus improving feed intake and efficiency.

Technical Information

Thickness: 13/16" (+/- 1/32")
20.50 mm (+/- 0.75 mm)

Size and layout: All floor systems can be custom-made to match your plans or existing facilities.

Anchors: Slat Lock system developed by Animat.

Weight: 4.60 lb/ft² (+/- 0.1 lb)
22.28 kg/m² (+/- 0.045 kg)

MAX GRIP

Benefits

- Reduces injuries
- Improves mobility
- Increases cattle comfort and confidence
- Promotes healthier cattle
- Improves feed conversion
- Increases weight gain
- Reduces lameness

Features

- Quickest installation in the industry
- Diamond tread pattern provides superior traction
- Offers optimal grip
- Custom cut to fit your facility, reduces installation time and waste
- Can be installed on new slats or existing old slats
- Our Slat Lock system keeps mats in place
- 40 years of experience in manufacturing quality rubber flooring

Slatted Rubber Flooring

Working Areas

MAX GRIP

Animat's MaxGrip provides the additional traction that is needed around the working area.

By adding the MaxGrip mats to the working area many producers report reduced slipping and less chute side noise which helps to calm cattle and provide a safer working area. Our interlocking mats lock together tight to provide a solid continuous surface free of gaps.

Brings calm to the herd and provides a safer working area

"We have been pleased with our investment in MaxGrip and Chute Mat. The interlocking MaxGrip mats have good traction and the workers note that the cattle seem to respond better on them. We also like the improved cleanup time compared to previous surfaces.

The Chute Mats have proven to be the best option for traction we have found. Falls and injuries are rare and the crew appreciates the reduced spattering of manure. We placed several of these in the sorting areas in front of the chute."

Testimonial

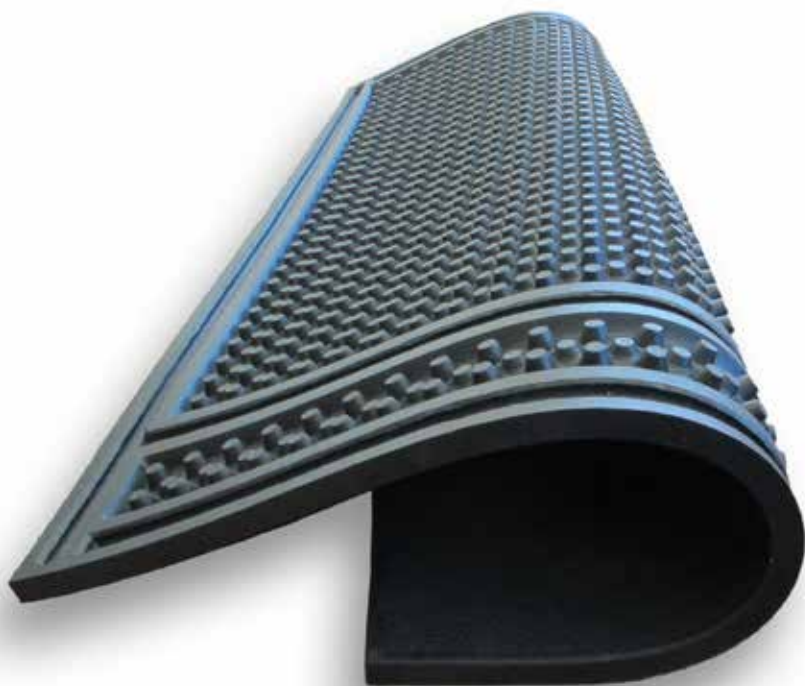

Cattle Chute

CHUTE MAT

The Animat Chute Mat will help make your cattle handling experience more enjoyable. The Chute Mat provides excellent footing for cattle as they exit the chute area, reducing the possibility of injury due to a slip or fall.

The superior footing helps keep cattle calm, as cattle that slip due to poor footing tend to become agitated and stressed.

Chute Mats are made of 100% recycled rubber and are designed with different height traction pegs to give cattle the sure footing they need as they exit the processing area. These mats are also used in difficult corners or turns where concrete has become slick from use.

Many producers also enjoy the added comfort these mats provide for their teams who spend many hours standing and processing cattle.

- Very durable, built for a long life
- Protect your cattle investment
- Helps keep working areas cleaner
- Reduces animal stress
- Chute Mats are 100% rubber

Other

MAX GRIP for Trailer

MaxGrip mats can also provide a cost effective way of reducing stress and injury while transporting cattle in producer's trailers. This is done by providing excellent footing and cushion for livestock during transported.

- Improve traction and reduce injuries
- Deaden sound and reduce stress on the cattle
- Reduce bedding expense
- Mats are removable

Reduce the
possibility of falls
while transporting
cattle

VITELLA
CALF MAT

Vitella is a heavy-duty vulcanized rubber mat designed, engineered, and rigorously tested to meet the standards of DIN 3763 Class II for calves up to 8 weeks or 250 kg in single-area boxes (or up to 350 kg if calves are kept in the same pen throughout the fattening or rearing period). Its distinctive studded underside offers superior cushioning, supporting calf growth and enhancing weight gain while minimizing noise and stress for the animal.

The dense rubber construction of Vitella is specifically engineered to reduce heat loss, a crucial feature for young calves that are more vulnerable to temperature fluctuations.

Thickness: 13/16" (20 mm)

Composition: 100% recycled vulcanized rubber

Size: 48" x 72" (122 cm x 183 cm)

Weight: 16.16 kg/m² (3.31 lbs/ft².)

About Animat

After more than 40 years of research and development, Animat continues to seek ways to improve comfort and productivity by producing the highest quality rubber flooring that meets the specific requirements of today's livestock producers and all the technological advances in the industry today.

Animat brings a high-quality product to the market. Precision manufacturing techniques that have been refined through years of research and development allow us to offer the perfect solution for your facility. We take great pride in manufacturing rubber mats.
